#### STAIN BLEACHING

#### FIELD OF INVENTION

The present invention relates to a process for removing coloured stains present on fabric at low washing temperatures.

#### BACKGROUND ART

10

15

20

25

30

When washing clothes and other types of fabric there are some coloured stains which are problematic to remove: These stains typically originate from red wine, fruit such as black currant, cherry, strawberry and tomato (in particular ketchup and spaghetti sauce), vegetables such as carrots and beetroot, tea, coffee, spices such as curry and paprika, grass, or ball pens/ink.

Commercial detergents normally include bleaching agents to solve the above mentioned problem. Traditionally, bleaching agents incorporated in detergent compositions are compounds which are precursors of hydrogen peroxide; hydrogen peroxide is then formed in the course of the washing procedure. Perborates and percarbonates are the most important examples of such hydrogen peroxide precursors. Perborate and percarbonate may also be combined with a peracid-forming bleach activator such as TAED (tetraacetylethylenediamine) or NOBS (nonanoyloxybenzenesulfonate).

These traditional bleaching systems function quite satisfactorily at high temperatures, the optimum operation temperature of these systems being typically above 60°C.

An important challenge during the last years has been to provide efficient bleaching systems which function at low temperatures ( $10^{\circ}\text{C} - 50^{\circ}\text{C}$ ).

In WO 89/09813 it is suggested to remove stains by using peroxidase. The process has an effect but a more efficient

stain bleaching system useful at low temperatures is still needed.

### SUMMARY OF THE INVENTION

5

It has now surprisingly been found possible to create a stain bleaching process which effectively removes stains at low temperatures, said process comprising contacting, in an aqueous medium, the fabric with a phenol oxidizing enzyme system and a mediator for a sufficient period of time, wherein said mediator can be described by one of the following formulas:

I:

10

20

25

15

in which formula A is a group such as -CO-X, -CH=CH-X, -CH=CH-CH=CH-X, -CH=CH-CO-X, -SO<sub>2</sub>-X, -PO-XZ, in which X and Z may be identical or different and selected from the group consisting of -H, -OH, -C<sub>n</sub>H<sub>2n+1</sub>, -OC<sub>n</sub>H<sub>2n+1</sub> and -N-EF, in which E and F may be identical or different and selected from the group consisting of -H and  $C_nH_{2n+1}$ ;  $1 \le n \le 5$ ; and B and C may be the same or different and selected from  $C_mH_{2m+1}$ ;  $1 \le m \le 5$ ; or

II:

30

35

10

15

25

35

substituent groups  $R^1-R^9$ , which may be identical or different, of the following radicals: independently represents any hydrogen, halogen, hydroxy, formyl, carboxy, and esters and salts hereof, carbamoyl, sulfo, and esters and salts hereof, sulfamoyl, nitro, amino, phenyl,  $C_1-C_{14}$ -alkyl,  $C_1-C_5$ -alkoxy,  $carbonyl-C_1-C_5-alkyl$ ,  $aryl-C_1-C_5-alkyl$ ; which carbamoyl, sulfa-carbanoyl, sulfa-carbanoylmoyl, and amino groups may furthermore be unsubstituted or substituted once or twice with a substituent group  $R^{10}$ ; and which phenyl may furthermore be unsubstituted or substituted with one or more substituent groups  $R^{10}$ ; and which  $C_1-C_{14}$ -alkyl,  $C_1-C_5$ alkoxy, carbonyl- $C_1$ - $C_5$ -alkyl, and aryl- $C_1$ - $C_5$ -alkyl groups may be saturated or unsaturated, branched or unbranched, and may furthermore be unsubstituted or substituted with one or more substituent groups R<sup>10</sup>;

which substituent group R10 represents any of the following radicals: halogen, hydroxy, formyl, carboxy and esters and salts hereof, carbamoyl, sulfo and esters and salts hereof, phenyl, aminoalkyl, piperidino, sulfamovl, nitro, amino,  $C_1-C_5-alkoxy;$ pyrrolidino, C<sub>1</sub>-C<sub>5</sub>-alkyl, piperazinyl, carbamoyl, sulfamoyl, and amino groups may furthermore be unsubstituted or substituted once or twice with hydroxy, C<sub>1</sub>-C<sub>5</sub>alkyl, C<sub>1</sub>-C<sub>5</sub>-alkoxy; and which phenyl may furthermore be substituted with one or more of the following radicals: halogen, hydroxy, amino, formyl, carboxy and esters and salts hereof, carbamoyl, sulfo and esters and salts hereof, and sulfamoyl; and which  $C_1$ - $C_5$ -alkyl, and  $C_1$ - $C_5$ -alkoxy groups may furthermore be saturated or unsaturated, branched or unbranched, and may furthermore be substituted once or twice with any of the following radicals: halogen, hydroxy, amino, formyl, carboxy and 30 esters and salts hereof, carbamoyl, sulfo and esters and salts hereof, and sulfamoyl;

or in which general formula two of the substituent groups R1-R9 may together form a group -B-, in which B represents any of the following the groups:  $(-CHR^{10}-N=N-)$ ,  $(-CH=CH-)_n$ ,  $(-CH=CH-)_n$  $CH=N-)_n$  or  $(-N=CR^{10}-NR^{11}-)$ , in which groups n represents an integer of from 1 to 3,  $R^{10}$  is a substituent group as defined above and R<sup>11</sup> is defined as R<sup>10</sup>.

### DETAILED DESCRIPTION OF THE INVENTION

According to the present invention it may be possible to remove coloured stains present on fabric at low washing temperatures, in particular at washing temperatures of from 5°C to 50°C, preferably at washing temperatures of from 10°C to 40°C, more preferably at temperatures of from 10°C to 30°C, even more preferably at temperatures of from 10°C to 20°C, by using a bleaching process comprising contacting, in an aqueous medium, the fabric with a phenol oxidizing enzyme and a mediator for a sufficient period of time.

Stains which may be removed according to the present invention typically originate from for example spices such as curry and paprika or vegetables/fruits, e.g., carrots.

The bleaching time for removing the stain(s) may vary; the fabric may be soaked for one or two days or the bleaching may be performed within a shorter period, typically for a period of 1 to 90 minutes, preferably for a period of 1 to 30 minutes.

#### Phenol Oxidizing Enzymes

20

25

30

35

By the term "a phenol oxidizing enzyme" is meant an enzyme, which by using hydrogen peroxide or molecular oxygen, is capable of oxidizing organic compounds containing phenolic groups. Examples of such enzymes are peroxidases and oxidases.

If the phenol oxidizing enzyme requires a source of hydrogen peroxide, the source may be hydrogen peroxide or a hydrogen peroxide precursor for in situ production of hydrogen peroxide, e.g., percarbonate or perborate, or a hydrogen peroxide generating enzyme system, e.g., an oxidase and a substrate for the oxidase, or an amino acid oxidase and a suitable amino acid, or a peroxycarboxylic acid or a salt thereof. Hydrogen peroxide may be added at the beginning of or during the process, e.g., in a concentration corresponding to

0.001-25 mM  $H_2O_2$ .

If the phenol oxidizing enzyme requires molecular oxygen, molecular oxygen from the atmosphere will usually be present in sufficient quantity.

In the context of the present invention the enzyme of enzyme possessing the phenol oxidizing enzyme may be an peroxidase activity or a laccase or a laccase related enzyme as described below.

According to the invention the concentration of the phenol oxidizing enzyme in the aqueous medium where the stain bleaching of the fabric is taking place, may be of from 0.001-100 mg of enzyme protein per liter, in particular of from 0.01-50 mg of enzyme protein per liter, even more preferably of from 0.1-10 mg of enzyme protein per liter.

15

30

35

10

5

#### Peroxidases and Compounds possessing Peroxidase Activity

An enzyme exhibiting peroxidase activity may be any peroxidase enzyme comprised by the enzyme classification (EC fragment derived therefrom, exhibiting any or 20 peroxidase activity, or synthetic or semisynthetic derivatives thereof (e.g. porphyrin ring systems or microperoxidases, cf. e.g. US 4,077,768, EP 537,381, WO 91/05858 and WO 92/16634).

Preferably, the peroxidase employed in the method of the invention is producible by plants (e.g. horseradish or 25 soybean peroxidase) or microorganisms such as fungi or bacteria. Some preferred fungi include strains belonging to the subdivision Deuteromycotina, class Hyphomycetes, e.g. Tricoderma, Myrothecium, Verticillum, Arthromyces, Humicola, Caldariomyces, Ulocladium, Embellisia, Cladosporium or schlera, in particular Fusarium oxysporum (DSM 2672), Humicola insolens, Trichoderma resii, Myrothecium verrucaria (IFO 6113), Verticillum alboatrum, Verticillum dahlie, Arthromyces ramosus Ulocladium chartarum, P-7754), Caldariomyces fumago, (FERM Embellisia alli or Dreschlera halodes.

Other preferred fungi include strains belonging to the Basidiomycetes, e.g. class Basidiomycotina, subdivision

15

35

Coprinus, Phanerochaete, Coriolus or Trametes, in particular Coprinus cinereus f. microsporus (IFO 8371), Coprinus macrorhizus, Phanerochaete chrysosporium (e.g. NA-12) or Trametes (previously called Polyporus), e.g. T. versicolor (e.g. PR4 28-A).

Further preferred fungi include strains belonging to the subdivision Zygomycotina, class Mycoraceae, e.g. Rhizopus or Mucor, in particular Mucor hiemalis.

Some preferred bacteria include strains of the order 10 Actinomycetales, e.g. Streptomyces spheroides (ATTC 23965), Streptomyces thermoviolaceus (IFO 12382) or Streptoverticillum verticillium ssp. verticillium.

Other preferred bacteria include Bacillus pumilus (ATCC 12905), Bacillus stearothermophilus, Rhodobacter sphaeroides, Rhodomonas palustri, Streptococcus lactis, Pseudomonas purrocinia (ATCC 15958) or Pseudomonas fluorescens (NRRL B-11).

Further preferred bacteria include strains belonging to Myxococcus, e.g. M. virescens.

The peroxidase may furthermore be one which is producible by a method comprising cultivating a host cell transformed with a recombinant DNA vector which carries a DNA sequence encoding said peroxidase as well as DNA sequences encoding functions permitting the expression of the DNA sequence encoding the peroxidase, in a culture medium under conditions permitting the expression of the peroxidase and recovering the peroxidase from the culture.

Particularly, a recombinantly produced peroxidase is a peroxidase derived from a *Coprinus* sp., in particular *C*.

30 macrorhizus or *C. cinereus* according to WO 92/16634, or a variant thereof, e.g., a variant as described in WO 93/24618 and WO 95/10602.

In the context of this invention, compounds possessing peroxidase activity comprise peroxidase enzymes and peroxidase active fragments derived from cytochromes, haemoglobin or peroxidase enzymes, and synthetic or semisynthetic derivatives

10

15

20

25

30

35

thereof, e.g., iron porphyrins, and iron phthalocyanine and derivatives thereof.

### Determination of Peroxidase Activity (PODU)

1 peroxidase unit (PODU) is the amount of enzyme that catalyzes the conversion of 1 μmole hydrogen peroxide per minute at the following analytical conditions: 0.88 mM hydrogen peroxide, 1.67 mM 2,2'-azinobis(3-ethylbenzothiazoline-6-sulfonate), 0.1 M phosphate buffer, pH 7.0, incubated at 30°C, photometrically followed at 418 nm.

#### Laccase and Laccase Related Enzymes

In the context of this invention, laccases and laccase related enzymes comprise any laccase enzyme comprised by the enzyme classification (EC 1.10.3.2), any catechol oxidase enzyme comprised by the enzyme classification (EC 1.10.3.1), any bilirubin oxidase enzyme comprised by the enzyme classification (EC 1.3.3.5) or any monophenol monooxygenase enzyme comprised by the enzyme classification (EC 1.14.18.1).

The above mentioned enzymes may be derived from plants, bacteria or fungi (including filamentous fungi and yeasts) and suitable examples include a laccase derivable from a strain of Aspergillus, Neurospora, e.g., N. crassa, Podospora, Botrytis, Collybia, Fomes, Lentinus, Pleurotus, Trametes, e.g., T. villosa and T. versicolor, Rhizoctonia, e.g., R. solani, Coprinus, e.g., C. plicatilis and C. cinereus, Psatyrella, Myceliophthora, e.g., M. thermophila, Schytalidium, Polyporus, e.g., P. pinsitus, Phlebia, e.g., P. radita (WO 92/01046), or Coriolus, e.g., C.hirsutus (JP 2-238885).

The laccase or the laccase related enzyme may furthermore be one which is producible by a method comprising cultivating a host cell transformed with a recombinant DNA vector which carries a DNA sequence encoding said laccase as well as DNA sequences encoding functions permitting the expression of the DNA sequence encoding the laccase, in a cul-

ture medium under conditions permitting the expression of the laccase enzyme, and recovering the laccase from the culture.

### Determination of Laccase Activity (LACU)

Laccase activity is determined from the oxidation of syringaldazin under aerobic conditions. The violet colour produced is photometered at 530 nm. The analytical conditions are 19  $\mu$ M syringaldazin, 23.2 mM acetate buffer, pH 5.5, 30°C, 1 min. reaction time.

10 1 laccase unit (LACU) is the amount of enzyme that catalyses the conversion of 1.0  $\mu$ mole syringaldazin per minute at these conditions.

#### Mediators

According to the present invention a mediator is any compound that enhances the bleaching process. The enhancing agent will typically be an organic compound, e.g., an organic compound described by one of the following formulas:

C-0

in which formula A is a group such as -CO-X, -CH=CH-X, -CH=CH-X and -CH=CH-X, -C

In the above mentioned formula A may be placed meta to the hydroxy group instead of being placed in the para-position as shown.

In particular embodiments, the mediator is acetosyringone, syringaldehyde, methylsyringate, syringic acid, ethylsyringate, propylsyringate, butylsyringate, hexylsyringate, octylsyringate or ethyl 3-(4-hydroxy-3,5-dimethoxyphenyl)acrylate.

The mediator used in the present invention may also be described by the following formula:

5

15

20

25

30

35

in which formula X represents (-0-) or (-S-), and the substituent groups R1-R9, which may be identical or different, of the following independently represents any hydrogen, halogen, hydroxy, formyl, carboxy, and esters and salts hereof, carbamoyl, sulfo, and esters and salts hereof, sulfamoyl, nitro, amino, phenyl, C<sub>1</sub>-C<sub>14</sub>-alkyl, C<sub>1</sub>-C<sub>5</sub>-alkoxy, aryl-C<sub>1</sub>-C<sub>5</sub>-alkyl; which carbamovl, carbonyl-C<sub>1</sub>-C<sub>5</sub>-alkyl, sulfamoyl, and amino groups may furthermore be unsubstituted or substituted once or twice with a substituent group  $R^{10}$ ; and which phenyl may furthermore be unsubstituted or substituted with one or more substituent groups  $R^{10}$ ; and which  $C_1-C_{14}$ -alkyl,  $C_1-C_5$ alkoxy, carbonyl- $C_1$ - $C_5$ -alkyl, and aryl- $C_1$ - $C_5$ -alkyl groups may be saturated or unsaturated, branched or unbranched, and may furthermore be unsubstituted or substituted with one or more substituent groups R10;

which substituent group  $R^{10}$  represents any of the following radicals: halogen, hydroxy, formyl, carboxy and esters and salts hereof, carbamoyl, sulfo and esters and salts hereof, sulfamoyl, nitro, amino, phenyl, aminoalkyl, piperidino, piperazinyl, pyrrolidino,  $C_1-C_5$ -alkyl,  $C_1-C_5$ -alkoxy; which

carbamoyl, sulfamoyl, and amino groups may furthermore be unsubstituted or substituted once or twice with hydroxy,  $C_1$ - $C_5$ -alkyl,  $C_1$ - $C_5$ -alkoxy; and which phenyl may furthermore be substituted with one or more of the following radicals: halogen, hydroxy, amino, formyl, carboxy and esters and salts hereof, carbamoyl, sulfo and esters and salts hereof, and sulfamoyl; and which  $C_1$ - $C_5$ -alkyl, and  $C_1$ - $C_5$ -alkoxy groups may furthermore be saturated or unsaturated, branched or unbranched, and may furthermore be substituted once or twice with any of the following radicals: halogen, hydroxy, amino, formyl, carboxy and esters and salts hereof, carbamoyl, sulfo and esters and salts hereof, and sulfamoyl;

or in which general formula two of the substituent groups  $R^1-R^9$  may together form a group -B-, in which B represents any of the following the groups:  $(-CHR^{10}-N=N-)$ ,  $(-CH=CH-)_n$ ,  $(-CH=N-)_n$  or  $(-N=CR^{10}-NR^{11}-)$ , in which groups n represents an integer of from 1 to 3,  $R^{10}$  is a substituent group as defined above and  $R^{11}$  is defined as  $R^{10}$ .

In particular embodiments, the mediator is 10-methyl-20 phenothiazine, 10-phenothiazine-propionic acid, N-hydroxysuccinimide-10-phenothiazine-propionate, 10-ethyl-4-phenothiazine-carboxylic acid, 10-ethylphenothiazine, phenothiazine, 10-isopropylphenothiazine, methyl-10-phenothiazinepropionate, 10-phenylphenothiazine, 10-allylpheno-25 thiazine, 10-(3-(4-methyl-1-piperazinyl)propyl)phenothiazine, 10-(2-pyrrolidinoethyl)phenothiazine, chlorpromazine, 2-chloro-10-methylphenothiazine, 2-acetyl-10-methylphenothiazine, carboxy-10-phenothiazine, 10-methylphenoxazine, 10-ethylphenoxazine, 10-phenoxazine-propionic acid or 4-carboxy-10-30 phenoxazine-propionic acid.

The mediator of the invention may be present in concentrations of from 0.01 to 5000  $\mu\text{M}$ , preferably in concentrations of from 0.1 to 1000  $\mu\text{M}$ , even more preferably in concentrations of from 1 to 500  $\mu\text{M}$ .

15

10

15

20

25

### Preparation of Mediators

The mediators described in the present application may be prepared using methods well known to those skilled in the art; some of the mediators are also commercially available.

Some of the mediators may be obtained from Sigma-Aldrich, Janssen Chimica, Kodak, Tokyo Kasai Organic Chemicals, Daiichi Pure Chemicals Co. or Boehringer Mannheim.

phenothiazine derivatives of -N-methylated phenoxazine may be prepared by methylation with methyliodide as described by Cornel Bodea and Ioan Silberg in "Recent Advances in the Chemistry of Phenothiazines" (Advances in heterocyclic chemistry, 1968, Vol. 9, pp. 321-460); B. Cardillo & G. Casnati 3771. Phenothiazine and 1967, Vol. 23, p. Tetrahedron, phenoxazine propionic acids may be prepared as described in J. Org. Chem. 15, 1950, pp. 1125-1130. Hydroxyethyl and hydroxypropyl derivatives of phenothiazine and phenoxazine may be prepared as described by G. Cauquil in Bulletin de la Society Chemique de France, 1960, p. 1049.

Methylsyringate, ethylsyringate, propylsyringate, butylsyringate, hexylsyringate and octylsyringate may be produced by using the method disclosed in <u>Chem. Ber.</u> 67, 1934, p. 67.

Ethyl 3-(4-hydroxy-3,5-dimethoxyphenyl)acrylate was synthesised from syringaldehyde and triethyl phosphonoacetate in ethanol/sodium ethanolate. The product was after purification characterised by <sup>1</sup>H-NMR and <sup>13</sup>C-NMR (showing spectra as expected) and the melting point was 68-70°C.

The invention is further illustrated in the following examples which are not intended to be in any way limiting to the 30 scope of the invention as claimed.

#### EXAMPLE 1

15

30

#### Stain Bleaching with mediated laccase systems

5 To investigate the stain bleaching effect of mediated laccase systems, small-scale washing trials were carried out. Test pieces of fabric soiled with beta-carotene, curry, and paprika, respectively, were treated in beakers with magnetical stirring in borate solution with several combinations of laccases and mediators.

The reference treatment in each case was a wash under the same conditions with no laccase-mediator system present.

After the wash, the test pieces of fabric were thoroughly rinsed in cold tap water and air-dried in the dark overnight. The bleaching effect of any given laccase-mediator system was then evaluated by using a Datacolor Elrepho 2000 (remission measurements at 460 nm) or by using a Minolta Chroma Meter (colourspace XYZ) using D65 as the light source.

Positive values of more than 2-3 units indicate 20 significant bleaching effects in both systems.

The mediators used are abbreviated as follows:

PPT: phenothiazine-10-propionic acid

EPC: 4-carboxyphenothiazine-10-propionic acid

25 POP: phenoxazine-10-propionic acid

AS: acetosyreingone,

(4-hydroxy-3,5-dimethoxyphenyl)ethan-1-one

MS: methyl syringate,

4-hydroxy-3,5-dimethoxybenzoic acid methyl ester

Wash trial 1. Laccase from Trametes villosa.

Medium: 25 mM borate (from boric acid with NaOH), pH 7.

Temperature: 40°C, 15°C, 10°C.

35 Duration of wash: 30 min.

Laccase preparation obtained in the following way:

800 ml culture broth of *Trametes villosa*, CBS 678.70, was filtered with filter aid to give a clear filtrate, which was concentrated and washed by ultrafiltration on a membrane with a cut-off of 6-8 kDa. One ml samples of concentrated preparation was applied onto a Q-Sepharose HP column (Pharmacia, Sweden) equilibrated with 0.1 M fosfate pH 7, and the laccase was eluted with a flat NaCl gradient around 0.25 M. Fractions with laccase activity from 10 runs were pooled and concentrated by ultrafiltration.

Laccase dossage: 1 mg/l washing liquor.

Mediator dosage: 120 µM. Mediators predissolved in ethanol.

It can be seen from the results presented above that paprika is bleached very effectively even at  $10-15^{\circ}\text{C}$ .

### Wash trial 2. Laccase from Coprinus cinereus.

15

Medium: 25 mM borate (from boric acid with NaOH), pH 8.5.

Temperature: 40° C.

Duration of wash: 30 min.

Laccase preparation obtained in the following way:

Coprinus cinereus (IFO 30116 - freely available to the public 20 from Institute of Fermentation, Osaka (IFO) under the indicated deposit number) was inoculated from a PDA agar slant (PDA: 39 g/l potato dextrose agar) into a 100 ml shake flask containing (Medium A is described below). The culture was cultivated for 6 days at 26°C and 100 rpm. A 10-liter fermentor 25 containing medium A was inoculated with the 100 ml culture broth. The fermentation ran for 6 days at 26°C and 100 rpm. The culture broth was filtrated and concentrated by ultrafiltration. Further purification was carried out using hydrophobic 30 interaction chromatography followed by anionic exchange chromatography. This process resultated in at preparation with a laccase activity of 3.6 LACU/ml. The estimated purity was >80% on a protein basis.

Medium A:	Soja meal	30 g/l
	Maltodextrin	15 g/l
	bacto peptone	5 g/l
	pluronic	0.2 g/1

Laccase dosage: 1 mg/l washing liquor.

Mediator dosage: 120  $\mu M$ . Mediators predissolved in ethanol.

### 20 Wash trial 3. Laccase from Myceliophthora thermophila.

Medium: 25 mM borate (from boric acid with NaOH) pH 8.5 at 40°C; 25 mM borate (from boric acid with NaOH) pH 7 at 15°C and at 10°C.

25 Temperature: 40°C, 15°C, 10°C.

Duration of wash: 30 min.

Laccase preparation obtained as described in PCT/US95/06815.

Laccase dosage: 1 mg/l washing liquor.

Mediator dosage: 120  $\mu M$ . Mediators predissolved in ethanol.

### Bleaching Results (40°C):

### Delta (remission (%) at 460 nm)

5		Betacarotene	Paprika
	PPT	4	0
	EPC	3	3
	AS	7	4
10	MS	7	8

### Bleaching results (15°C):

### Calculated Delta-E (colourspace XYZ)

15

Paprika\*

MS

21

20

### Bleaching results (10°C):

### Calculated Delta-E (colourspace XYZ)

25

Paprika\*

PPT

17

30 \*): The paprika test pieces of fabric were obtained from Center for Testmaterials, WFK P (P043).

It can be seen from the results presented above that paprika is bleached very effectively even at  $10-15^{\circ}$ C.

#### EXAMPLE 2

### Stain bleaching with mediated peroxidase systems

To investigate the stain bleaching effect of mediated peroxidase systems, a small-scale washing trial was carried out analogously to the ones described in Example 1.

### Wash trial. Peroxidase from Coprinus cinereus.

10

5

Medium: 25 mM borate (from boric acid with NaOH), pH 7.

Temperature: 40°C, 15°C, 10°C.

Duration of wash: 30 min.

Peroxidase preparation obtained as described in WO 94/12621.

15 Peroxidase dosage: 0.2 mg/l washing liquor.

Mediator dosage: 120  $\mu M$ . Mediators predissolved in ethanol.

Hydrogen peroxide: 0.5 mM.

### Bleaching Results (40°C):

20

### Delta (remission (%) at 460 nm)

		Betacarotene	Curry	Paprika
25	PPT	12	9	25
	EPC	13	8	21
	POP	4	4	18
	AS	0	8	13
	MS	9	9	20

Bleaching results (15°C):

### Calculated Delta-E (colourspace XYZ)

30

Paprika\*

PPT

28

### 5 Bleaching Results (10°C):

### Calculated Delta-E (colourspace XYZ)

10

Paprika\*

MS

23

15 \*): The paprika test pieces of fabric were obtained from Center for Testmaterials, WFK P (P043).

It can be seen from the results presented above that paprika is bleached very effectively even at 10-15°C.

20

#### EXAMPLE 3

### Stain bleaching with mediated peroxidase systems

Peroxidase-mediator systems identical to or similar to the ones studied in Example 2 were subjected to a Launder-ometer wash trial to investigate the effects of having a closed system and a different mechanical treatment. The Launder-ometer is a laboratory-scale set-up for simulating conditions in a traditional front-loaded European washing machine.

30

### Wash trial. Peroxidase from Coprinus cinereus.

Medium: 25 mM borate (from boric acid with NaOH), pH 7.

Temperature: 40°C.

35 Duration of wash: 5 min preheating from 35°C to 40°C, then 30

min. wash at 40°C.

Peroxidase preparation obtained as described Example 2.

Peroxidase dosage: 120 µM. Mediators predissolved in ethanol.

Hydrogen peroxide: 0.5 mM.

5

Mediators tested: the above ones (see Example 1), except AS, and additionally MPT, 10-methylpenothiazine.

#### Bleaching results:

10

#### Delta (remission (%) at 460 nm)

		Betacarotene	Curry	Paprika
15	PPT	11	6	11
	EPC	10	5	10
	MPT	8	4	6
	POP	6	3	10
	MS	7	7	10

20

25

35

It is seen that trends are much the same as in the small-scale washing test in Example 2. (The absolute numbers obtained depend on, among other things, wash load and mechanical action on the fabrics in the wash and are not directly comparable between the two examples here.)

#### EXAMPLE 4

# Stain bleaching with a laccase and a series of homologous alkyl syringates as mediators

To investigate the effect on stain bleaching properties of homologous alkyl syringates mediators, a series of alkyl syringates was tested in an experiment much like the one in Example 3, except that the enzyme was a laccase instead of a peroxidase.

### Wash trial. Laccase from Trametes villosa.

Medium: 25 mM borate (from boric acid with NaOH), pH 7.

Temperature: 40°C.

5 Duration of wash: 5 min preheating from 35°C to 40°C, then 30 min wash at 40°C.

Laccase preparation obtained as described in Example 1.

Laccase dosage 1 mg/l washing liquor.

Mediator dosage: 120  $\mu M$ . Mediators predissolved in ethanol.

10

Mediators tested: methyl, ethyl, propyl, butyl, hexyl, and octyl syringate.

#### Bleaching results:

15

### Delta (remission (%) at 460 nm)

		<u>Betacarotene</u>
	methyl	13
20	ethyl	13
	propyl	32
	butyl	26
	hexyl	8
	octyl	2

25

It is seen that a marked optimum is reached at chain lengths 3 and 4 of the alkyl group. All these syringates except the octyl homologue achieve significant bleaching under the conditions given.

#### CLAIMS

1. A process for bleaching stains present on fabric, comprising contacting, in an aqueous medium, the fabric with a phenol oxidizing enzyme system and a mediator for a sufficient period of time, wherein said mediator can be described by one of the following formulas:

I:

10

5

15

in which formula A is a group such as -CO-X, -CH=CH-X, -CH=CH-CH=CH-X, -CH=CH-CO-X, -SO<sub>2</sub>-X, -PO-XZ, in which X and Z may be identical or different and selected from the group consisting of -H, -OH, -C<sub>n</sub>H<sub>2n+1</sub>, -OC<sub>n</sub>H<sub>2n+1</sub> and -N-EF, in which E and F may be identical or different and selected from the group consisting of -H and  $C_nH_{2n+1}$ ;  $1 \le n \le 5$ ; and B and C may be the same or different and selected from  $C_mH_{2m+1}$ ;  $1 \le m \le 5$ ; or

25 II:

30

35

in which formula X represents (-O-) or (-S-), and the substituent groups  $R^1-R^9$ , which may be identical or different, independently represents any of the following radicals: hydrogen, halogen, hydroxy, formyl, carboxy, and esters and salts hereof, carbamoyl, sulfo, and esters and salts hereof, sulfamoyl, nitro, amino, phenyl,  $C_1-C_1-C_2-alkyl$ ,  $C_1-C_3-alkyl$ , aryl- $C_1-C_3-alkyl$ ; which carbamoyl, sulfa-

moyl, and amino groups may furthermore be unsubstituted or substituted once or twice with a substituent group  $R^{10}$ ; and which phenyl may furthermore be unsubstituted or substituted with one or more substituent groups  $R^{10}$ ; and which  $C_1$ - $C_{14}$ -alkyl,  $C_1$ - $C_5$ -alkoxy, carbonyl- $C_1$ - $C_5$ -alkyl, and aryl- $C_1$ - $C_5$ -alkyl groups may be saturated or unsaturated, branched or unbranched, and may furthermore be unsubstituted or substituted with one or more substituent groups  $R^{10}$ ;

which substituent group R10 represents any of the following radicals: halogen, hydroxy, formyl, carboxy and esters 10 and salts hereof, carbamoyl, sulfo and esters and salts hereof, sulfamoyl, nitro, amino, phenyl, aminoalkyl, piperidino. piperazinyl, pyrrolidino, C<sub>1</sub>-C<sub>5</sub>-alkyl, C<sub>1</sub>-C<sub>5</sub>-alkoxy; carbamoyl, sulfamoyl, and amino groups may furthermore be unsubstituted or substituted once or twice with hydroxy,  $C_1-C_5-$ 15 alkyl,  $C_1-C_5$ -alkoxy; and which phenyl may furthermore be substituted with one or more of the following radicals: halogen, hydroxy, amino, formyl, carboxy and esters and salts hereof, carbamoyl, sulfo and esters and salts hereof, and sulfamoyl; and which  $C_1-C_5$ -alkyl, and  $C_1-C_5$ -alkoxy groups may furthermore be 20 saturated or unsaturated, branched or unbranched, furthermore be substituted once or twice with any of the following radicals: halogen, hydroxy, amino, formyl, carboxy and esters and salts hereof, carbamoyl, sulfo and esters and salts 25 hereof, and sulfamovl;

or in which general formula two of the substituent groups  $R^1-R^9$  may together form a group -B-, in which B represents any of the following the groups:  $(-CHR^{10}-N=N-)$ ,  $(-CH=CH-)_n$ ,  $(-CH=N-)_n$  or  $(-N=CR^{10}-NR^{11}-)$ , in which groups n represents an integer of from 1 to 3,  $R^{10}$  is a substituent group as defined above and  $R^{11}$  is defined as  $R^{10}$ .

2. A process according to claim 1, in which the phenol oxidizing enzyme system is a peroxidase and a hydrogen peroxide source.

30

- 3. A process according to claim 2, wherein the peroxidase is horseradish peroxidase, soybean peroxidase or a peroxidase enzyme derived from Coprinus, Bacillus or Myxococcus.
- 5 4. A process according to claim 2 or 3, wherein the hydrogen peroxide source is hydrogen peroxide or a hydrogen peroxide precursor.
- 5. A process according to claim 1, wherein the aqueous medium 10 contains  $H_2O_2$  or a precursor for  $H_2O_2$  in a concentration corresponding to 0.001-25 mM  $H_2O_2$ .
- 6. A process according to claim 1, in which the phenol oxidizing enzyme system is a laccase or a laccase related enzyme together 15 with oxygen.
  - 7. A process according to claim 6, wherein the laccase is derived from Trametes, Coprinus, or Myceliophthora.
- 8. A process according to claim 1, wherein the concentration of the phenol oxidizing enzyme corresponds to 0.001-100 mg of enzyme protein per liter of aqueous medium.
- A process according to claim 1, wherein the mediator belongs
   to the group consisting of acetosyringone, syringaldehyde,
   methylsyringate and syringic acid.
- 10. A process according to claim 1, wherein the mediator belongs to the group consisting of 10-methylphenothiazine, phenothiazine-10-propionic acid, phenoxazine-10-propionic acid, phenoxazine-10-hydroxyethyl, phenothiazine-10-ethyl-4-carboxy, promazine hydrochloride and phenothiazine-10-ethylalcohol.
- 11. A process according to claim 1, wherein the mediator in the aqueous medium is present in concentrations of from 0.01 to 5000  $\mu M$ .

12. A process according to claim 1, wherein the phenol oxidizing enzyme system in the aqueous medium is present in concentrations of from 0.001-100 mg of enzyme protein per liter.
